📄 Profile

I design and produce industry-standard games and interactive media, with experience spanning research, academic, professional, and passion projects. Skilled in gameplay, audio, VR, and systems design, I have held roles including programmer, designer, producer, and project lead, often handling technical hardware and low-level tasks. I thrive in collaborative environments with clear expectations, and I am an aficionado of VR applications, research and immersive experiences. I am continuously expanding my skills, most recently exploring Linux development. I am motivated by problem-solving and healthy work environments.

🧠 Skills

C# — Object-Oriented Programming

Unity3D — Component-Based Workflow | 2D, 3D, VR, Mobile, WebGL, ProBuilder, DOTween, Proton

C++ & Java — Games & Toys

Version Control — git, LFS & Plastic

Workspace Tools — Notion, Miro & Flgma, GoogleSuite, GitHub Projects, Discord, Slack, Steam Pages

Project Management — Games, Coordination, Interdisciplinary and International Teams Productions

IT — Windows, macOS, Linux (Fedora), MS 365, GSuite, GDPR, Communication, Service, Hardware/Devices, QA

AI Use — Copilot, Claude, ChatGPT

Audio Implementation — FMOD, Wwise, Unity Audio, Soundly

Audio Production — Logic Pro X, Ableton, Pro Tools, Reaper, iZotope RX, Synthesis, Engineering, Recording

Master Thesis — Designed and developed a VR application integrating real-time physiological player data (EEG)

Bonus — I have two cats, I grow my own chilies, I love cooking and I play lead guitar in two heavy metal bands

🏢 Professional Experience

Tea Cup Aps 🌐, Unity Developer

01/2026 | Denmark

Indie Single-Player Horror Game (PC – Windows & Linux) Unity / C#

- **Audio Systems Debugging & Optimization** — Resolved clipping, inconsistent dynamics, improper fades, duplicate triggers, and low-fidelity asset issues, resulting in a coherent and performant runtime audio mix.
- **Audio Design Expansion** — Improved systemic audio behaviours and event-driven playback to enhance immersion and tension pacing.
- **Gameplay Systems Design & Implementation** — Designed and implemented narrative-driven gameplay events to improve pacing and cinematic sequencing.
- **Unity Systems Engineering** — Diagnosed and corrected engine-level issues including Cinemachine Brain update conflicts (frame-rate dependent mouse input), sensitivity persistence bugs, and update loop misuse.
- **Performance Profiling & Optimization** — Implemented occlusion culling, removed unseen geometry (vertex/triangle reduction), optimized URP lighting, and configured baked lighting with Shadowmask for improved runtime performance.
- **QA & Testing** - Functional, regression, and exploratory testing with documentation. Performance Profiling & bottleneck finding.

Footstomp Studios 🌐, Game Designer

02/2019 — present | Free time Passion projects - Remote

• **Full Production Cycle Across Multiple Multiplayer Titles**

- Resolved networked audio design challenges, including spatial 3D audio behaviour in multiplayer environments

Complete Design, Production & Implementation of Game Audio (Unity, FMOD, Wwise)

- Audio pipeline setup, technical documentation, and platform build configuration
- **Gameplay Prototyping, Systems Testing & Feature Implementation**
- Authored design documentation and carried features through to production
- Held role of project manager ensuring alignment and delivery on team agreements

Steam Release Management & Community Playtesting Support

- Coordinated release preparation and incorporated structured community feedback into iteration cycles

Recreational Fear Lab (Aarhus University) 🌐, Sound Designer

04/2022 — 09/2022 | Remote

- Audio & Implementation for Hyper-Realistic VR Simulations
- Sound Design for Escape Room Experiences

Dystopia Entertainment, Goathamster Studios, Freelance Sound Designer
2020 — 2022

Various Sound Design Tasks

Fabula Studios 🌐, Sound Design Intern

2021 — 2021 | Copenhagen

- Sound Design Production & Implementation (2.5D Game)
- Foley Recording & Integration, Audio Systems Design in Unity

🎓 Education

Master Of Science In Games, ITU Copenhagen

2022 — 2024

The Design Track specialisation teaches you how to be creative with play design methods. From playfully exploring the potential of new technologies to the psychology of why and how we play, it provides a toolset and theoretical grounding for creating innovative interactive experiences. Courses include:

- Conceptualize, prototype, design, develop, and test a digital game individually and in teams.
- Reflect on the relation between design and technical implementation in innovation-driven projects.
- Practice different concept development, sketching, prototyping, and game design methods.
- The politics and ideologies of games, player cultures, edutainment and gamification
- Participation DADIU fall '23

Bachelor's Degree in Sound Design, Sonic Collage

2016 — 2020

The programme is a professional foundation in music and sound production, with an equal focus on the commercial, communicative and artistic aspects - mainly taught by working industry professionals. Courses include:

- Audio Engineering
- Game Audio (Unity Audio, FMOD, Wwise)
- 3D & Binaural Audio, Interactive Sound Design

Higher Technical Exam (HTX), HTX Viby

English, Communication & IT Robot Tech
